Exhibit A  
(for 09/763,712 response)

**IN THE UNITED STATES PATENT OFFICE**

**U.S. Patent Application No. 09/763,712**  
**(U.S. Phase of PCT/JP99/04552)**  
**of Nobutaka WAKAMIYA**

I, Seung-Lim SUNG, of ARCO PATENT OFFICE at 3<sup>rd</sup> Fl., Bo-eki Building, 123 Higashi-machi, Chuo-ku, Kobe 650-0031 JAPAN, declare that I am familiar with the Japanese and the English language and, to the best of my knowledge and belief, the attached is a full, true, faithful my prepared English translation of Japanese Patent Application No. 10-237611 filed on August 24, 1998 which is the priority case in U.S. Patent Application No. 09/763,712.

Signature:

[CLAIMS]

[CLAIM 1]    A polynucleotide comprising the base sequence that encodes a protein consisting of the amino acid sequence (206<sup>th</sup>-547<sup>th</sup> residues in SEQ ID NO:2) of:

Met-Gln-Gln-Asp-Leu-Met-Arg-Ser-Arg-Leu-Asp-Thr-Glu-Val-Ala-Asn-  
Leu-Ser-Val-Ile-Met-Glu-Glu-Met-Lys-Leu-Val-Asp-Ser-Lys-His-Gly-  
Gln-Leu-Ile-Lys-Asn-Phe-Thr-Ile-Leu-Gln-Gly-Pro-Pro-Gly-Pro-Arg-  
Gly-Pro-Arg-Gly-Asp-Arg-Gly-Ser-Gln-Gly-Pro-Pro-Gly-Pro-Thr-Gly-  
Asn-Lys-Gly-Gln-Lys-Gly-Glu-Lys-Gly-Glu-Pro-Gly-Pro-Pro-Gly-Pro-  
Ala-Gly-Glu-Arg-Gly-Pro-Ile-Gly-Pro-Ala-Gly-Pro-Pro-Gly-Glu-Arg-  
Gly-Gly-Lys-Gly-Ser-Lys-Gly-Ser-Gln-Gly-Pro-Lys-Gly-Ser-Arg-Gly-  
Ser-Pro-Gly-Lys-Pro-Gly-Pro-Gln-Gly-Pro-Ser-Gly-Asp-Pro-Gly-Pro-  
Pro-Gly-Pro-Pro-Gly-Lys-Glu-Gly-Leu-Pro-Gly-Pro-Gln-Gly-Pro-Pro-  
Gly-Phe-Gln-Gly-Leu-Gln-Gly-Thr-Val-Gly-Glu-Pro-Gly-Val-Pro-Gly-  
Pro-Arg-Gly-Leu-Pro-Gly-Leu-Pro-Gly-Val-Pro-Gly-Met-Pro-Gly-Pro-  
Lys-Gly-Pro-Pro-Gly-Pro-Pro-Gly-Pro-Ser-Gly-Ala-Val-Val-Pro-Leu-  
Ala-Leu-Gln-Asn-Glu-Pro-Thr-Pro-Ala-Pro-Glu-Asp-Asn-Gly-Cys-Pro-  
Pro-His-Trp-Lys-Asn-Phe-Thr-Asp-Lys-Cys-Tyr-Tyr-Phe-Ser-Val-Glu-  
Lys-Glu-Ile-Phe-Glu-Asp-Ala-Lys-Leu-Phe-Cys-Glu-Asp-Lys-Ser-Ser-  
His-Leu-Val-Phe-Ile-Asn-Thr-Arg-Glu-Glu-Gln-Gln-Trp-Ile-Lys-Lys-  
Gln-Met-Val-Gly-Arg-Glu-Ser-His-Trp-Ile-Gly-Leu-Thr-Asp-Ser-Glu-  
Arg-Glu-Asn-Glu-Trp-Lys-Trp-Leu-Asp-Gly-Thr-Ser-Pro-Asp-Tyr-Lys-  
Asn-Trp-Lys-Ala-Gly-Gln-Pro-Asp-Asn-Trp-Gly-His-Gly-His-Gly-Pro-  
Gly-Glu-Asp-Cys-Ala-Gly-Leu-Ile-Tyr-Ala-Gly-Gln-Trp-Asn-Asp-Phe-  
Gln-Cys-Glu-Asp-Val-Asn-Asn-Phe-Ile-Cys-Glu-Lys-Asp-Arg-Glu-Thr-  
Val-Leu-Ser-Ser-Ala-Leu.

[CLAIM 2] A polynucleotide comprising the base sequence that encodes a protein consisting of the amino acid sequence (229<sup>th</sup>-547<sup>th</sup> residues in SEQ ID NO:2) of:

Met-Lys-Leu-Val-Asp-Ser-Lys-His-Gly-Gln-Leu-Ile-Lys-Asn-Phe-Thr-Ile-Leu-Gln-Gly-Pro-Pro-Gly-Pro-Arg-Gly-Pro-Arg-Gly-Asp-Arg-Gly-Ser-Gln-Gly-Pro-Pro-Gly-Pro-Thr-Gly-Asn-Lys-Gly-Gln-Lys-Gly-Glu-Lys-Gly-Glu-Pro-Gly-Pro-Pro-Gly-Pro-Ala-Gly-Glu-Arg-Gly-Pro-Ile-Gly-Pro-Ala-Gly-Pro-Pro-Gly-Glu-Arg-Gly-Gly-Lys-Gly-Ser-Lys-Gly-Ser-Gln-Gly-Pro-Lys-Gly-Ser-Arg-Gly-Ser-Pro-Gly-Lys-Pro-Gly-Pro-Gln-Gly-Pro-Ser-Gly-Asp-Pro-Gly-Pro-Pro-Gly-Pro-Pro-Gly-Lys-Glu-Gly-Leu-Pro-Gly-Pro-Gln-Gly-Pro-Pro-Gly-Phe-Gln-Gly-Leu-Gln-Gly-Thr-Val-Gly-Glu-Pro-Gly-Val-Pro-Gly-Pro-Arg-Gly-Leu-Pro-Gly-Leu-Pro-Gly-Val-Pro-Gly-Met-Pro-Gly-Pro-Lys-Gly-Pro-Pro-Gly-Pro-Pro-Gly-Pro-Ser-Gly-Ala-Val-Val-Pro-Leu-Ala-Leu-Gln-Asn-Glu-Pro-Thr-Pro-Ala-Pro-Glu-Asp-Asn-Gly-Cys-Pro-Pro-His-Trp-Lys-Asn-Phe-Thr-Asp-Lys-Cys-Tyr-Tyr-Phe-Ser-Val-Glu-Lys-Glu-Ile-Phe-Glu-Asp-Ala-Lys-Leu-Phe-Cys-Glu-Asp-Lys-Ser-Ser-His-Leu-Val-Phe-Ile-Asn-Thr-Arg-Glu-Glu-Gln-Gln-Trp-Ile-Lys-Lys-Gln-Met-Val-Gly-Arg-Glu-Ser-His-Trp-Ile-Gly-Leu-Thr-Asp-Ser-Glu-Arg-Glu-Asn-Glu-Trp-Lys-Trp-Leu-Asp-Gly-Thr-Ser-Pro-Asp-Tyr-Lys-Asn-Trp-Lys-Ala-Gly-Gln-Pro-Asp-Asn-Trp-Gly-His-Gly-His-Gly-Pro-Gly-Glu-Asp-Cys-Ala-Gly-Leu-Ile-Tyr-Ala-Gly-Gln-Trp-Asn-Asp-Phe-Gln-Cys-Glu-Asp-Val-Asn-Asn-Phe-Ile-Cys-Glu-Lys-Asp-Arg-Glu-Thr-Val-Leu-Ser-Ser-Ala-Leu.

[CLAIM 3] The polynucleotide according to Claim 2 further comprises in upstream of the first methionine residue (229<sup>th</sup> residue in SEQ ID NO:2) the amino acid sequence of:

Met-Glu-Glu (226<sup>th</sup>-228<sup>th</sup> residues in SEQ ID NO:2); or  
Met-Arg-Ser-Arg-Leu-Asp-Thr-Glu-Val-Ala-Asn-Leu-Ser-Val-Ile-Met-Glu-Glu (211<sup>th</sup>-228<sup>th</sup> residues in SEQ ID NO:2).

[CLAIM 4] The polynucleotide according to Claim 2, wherein said protein further comprises in upstream of the first methionine residue (229<sup>th</sup> residue in SEQ ID NO:2) the amino acid sequence of:

(102<sup>nd</sup>-228<sup>th</sup> residues in SEQ ID NO:2)

Met-Glu-Asn-Ile-Thr-Thr-Ile-Ser-Gln-Ala-Asn-Glu-Gln-Asn-Leu-Lys-  
Asp-Leu-Gln-Asp-Leu-His-Lys-Asp-Ala-Glu-Asn-Arg-Thr-Ala-Ile-Lys-  
Phe-Asn-Gln-Leu-Glu-Glu-Arg-Phe-Gln-Leu-Phe-Glu-Thr-Asp-Ile-Val-  
Asn-Ile-Ile-Ser-Asn-Ile-Ser-Tyr-Thr-Ala-His-His-Leu-Arg-Thr-Leu-  
Thr-Ser-Asn-Leu-Asn-Glu-Val-Arg-Thr-Thr-Cys-Thr-Asp-Thr-Leu-Thr-  
Lys-His-Thr-Asp-Asp-Leu-Thr-Ser-Leu-Asn-Asn-Thr-Leu-Ala-Asn-Ile-  
Arg-Leu-Asp-Ser-Val-Ser-Leu-Arg-Met-Gln-Gln-Asp-Leu-Met-Arg-Ser-  
Arg-Leu-Asp-Thr-Glu-Val-Ala-Asn-Leu-Ser-Val-Ile-Met-Glu-Glu;

(91<sup>st</sup>-228<sup>th</sup> residues in SEQ ID NO:2)

Met-Asn-Ser-Gln-Leu-Asn-Ser-Phe-Thr-Gly-Gln-Met-Glu-Asn-Ile-Thr-  
Thr-Ile-Ser-Gln-Ala-Asn-Glu-Gln-Asn-Leu-Lys-Asp-Leu-Gln-Asp-Leu-  
His-Lys-Asp-Ala-Glu-Asn-Arg-Thr-Ala-Ile-Lys-Phe-Asn-Gln-Leu-Glu-  
Glu-Arg-Phe-Gln-Leu-Phe-Glu-Thr-Asp-Ile-Val-Asn-Ile-Ile-Ser-Asn-  
Ile-Ser-Tyr-Thr-Ala-His-His-Leu-Arg-Thr-Leu-Thr-Ser-Asn-Leu-Asn-  
Glu-Val-Arg-Thr-Thr-Cys-Thr-Asp-Thr-Leu-Thr-Lys-His-Thr-Asp-Asp-  
Leu-Thr-Ser-Leu-Asn-Asn-Thr-Leu-Ala-Asn-Ile-Arg-Leu-Asp-Ser-Val-  
Ser-Leu-Arg-Met-Gln-Gln-Asp-Leu-Met-Arg-Ser-Arg-Leu-Asp-Thr-Glu-  
Val-Ala-Asn-Leu-Ser-Val-Ile-Met-Glu-Glu;

(9<sup>th</sup>-228<sup>th</sup> residues in SEQ ID NO:2)

Met-Asn-Leu-Asn-Asn-Leu-Asn-Leu-Thr-Gln-Val-Gln-Gln-Arg-Asn-Leu-  
Ile-Thr-Asn-Leu-Gln-Arg-Ser-Val-Asp-Asp-Thr-Ser-Gln-Ala-Ile-Gln-  
Arg-Ile-Lys-Asn-Asp-Phe-Gln-Asn-Leu-Gln-Gln-Val-Phe-Leu-Gln-Ala-

Lys-Lys-Asp-Thr-Asp-Trp-Leu-Lys-Glu-Lys-Val-Gln-Ser-Leu-Gln-Thr-  
Leu-Ala-Ala-Asn-Asn-Ser-Ala-Leu-Ala-Lys-Ala-Asn-Asn-Asp-Thr-Leu-  
Glu-Asp-Met-Asn-Ser-Gln-Leu-Asn-Ser-Phe-Thr-Gly-Gln-Met-Glu-Asn-  
Ile-Thr-Thr-Ile-Ser-Gln-Ala-Asn-Glu-Gln-Asn-Leu-Lys-Asp-Leu-Gln-  
Asp-Leu-His-Lys-Asp-Ala-Glu-Asn-Arg-Thr-Ala-Ile-Lys-Phe-Asn-Gln-  
Leu-Glu-Glu-Arg-Phe-Gln-Leu-Phe-Glu-Thr-Asp-Ile-Val-Asn-Ile-Ile-  
Ser-Asn-Ile-Ser-Tyr-Thr-Ala-His-His-Leu-Arg-Thr-Leu-Thr-Ser-Asn-  
Leu-Asn-Glu-Val-Arg-Thr-Thr-Cys-Thr-Asp-Thr-Leu-Thr-Lys-His-Thr-  
Asp-Asp-Leu-Thr-Ser-Leu-Asn-Asn-Thr-Leu-Ala-Asn-Ile-Arg-Leu-Asp-  
Ser-Val-Ser-Leu-Arg-Met-Gln-Gln-Asp-Leu-Met-Arg-Ser-Arg-Leu-Asp-  
Thr-Glu-Val-Ala-Asn-Leu-Ser-Val-Ile-Met-Glu-Glu; or

(1<sup>st</sup>-228<sup>th</sup> residues in SEQ ID NO:2)

Met-Tyr-Ser-His-Asn-Val-Val-Ile-Met-Asn-Leu-Asn-Asn-Leu-Asn-Leu-  
Thr-Gln-Val-Gln-Gln-Arg-Asn-Leu-Ile-Thr-Asn-Leu-Gln-Arg-Ser-Val-  
Asp-Asp-Thr-Ser-Gln-Ala-Ile-Gln-Arg-Ile-Lys-Asn-Asp-Phe-Gln-Asn-  
Leu-Gln-Gln-Val-Phe-Leu-Gln-Ala-Lys-Lys-Asp-Thr-Asp-Trp-Leu-Lys-  
Glu-Lys-Val-Gln-Ser-Leu-Gln-Thr-Leu-Ala-Ala-Asn-Asn-Ser-Ala-Leu-  
Ala-Lys-Ala-Asn-Asn-Asp-Thr-Leu-Glu-Asp-Met-Asn-Ser-Gln-Leu-Asn-  
Ser-Phe-Thr-Gly-Gln-Met-Glu-Asn-Ile-Thr-Thr-Ile-Ser-Gln-Ala-Asn-  
Glu-Gln-Asn-Leu-Lys-Asp-Leu-Gln-Asp-Leu-His-Lys-Asp-Ala-Glu-Asn-  
Arg-Thr-Ala-Ile-Lys-Phe-Asn-Gln-Leu-Glu-Glu-Arg-Phe-Gln-Leu-Phe-  
Glu-Thr-Asp-Ile-Val-Asn-Ile-Ile-Ser-Asn-Ile-Ser-Tyr-Thr-Ala-His-  
His-Leu-Arg-Thr-Leu-Thr-Ser-Asn-Leu-Asn-Glu-Val-Arg-Thr-Thr-Cys-  
Thr-Asp-Thr-Leu-Thr-Lys-His-Thr-Asp-Asp-Leu-Thr-Ser-Leu-Asn-Asn-  
Thr-Leu-Ala-Asn-Ile-Arg-Leu-Asp-Ser-Val-Ser-Leu-Arg-Met-Gln-Gln-  
Asp-Leu-Met-Arg-Ser-Arg-Leu-Asp-Thr-Glu-Val-Ala-Asn-Leu-Ser-Val-

Ile-Met-Glu-Glu.

[CLAIM 5] A polynucleotide comprising the base sequence (670<sup>th</sup>-1695<sup>th</sup> bases in SEQ ID NO:1) of:

【CLAIM 10】 A polynucleotide which encode a novel collectin and can hybridize under a stringent condition with a probe of an amplification product from PCR reaction performed using primers having the base sequences of:

caatctgatgagaaggtgatg (SEQ ID NO: 4) and  
acgaggggctggatgggacat (SEQ ID NO: 5).

【CLAIM 11】 A polynucleotide which can hybridize under a stringent condition with the polynucleotide according to any of Claims 1-10, wherein a protein encoded by the polynucleotide is a novel collectin comprising: (1) Ca<sup>2+</sup>-dependent carbohydrate recognition domain (CRD), and (2) collagen-like region.

【CLAIM 12】 The polynucleotide according to any of Claims 1-11, wherein said polynucleotide is cDNA.

【CLAIM 13】 Collectin protein comprising the amino acid sequence encoded by the polynucleotide according to any of Claims 5-12.

【CLAIM 14】 Collectin protein comprising the amino acid sequence of:

(206<sup>th</sup> -547<sup>th</sup> residues in SEQ ID NO: 2)

Met-Gln-Gln-Asp-Leu-Met-Arg-Ser-Arg-Leu-Asp-Thr-Glu-Val-Ala-Asn-

[CLAIM 18] The collectin protein according to any of Claims 13-17 which is from human.

[CLAIM 19] The collectin protein which consists of the amino acid sequence comprising deletion, substitution and/or addition of one or more amino acid/s in the collectin protein according to any of Claims 13-18, and comprises (1) Ca<sup>2+</sup>-dependent carbohydrate recognition domain (CRD), and (2) collagen-like region.

[DETAILED DESCRIPTION OF THE INVENTION]

[0001]

[TECHNICAL FIELD WHERE THE INVENTION BELONGS]

The present invention relates to a novel collectin which is useful for investigating mechanisms of biological defense system, and is expected to be applied for utilizing as materials for medicines because it may have physiological activities including anti-viral activities and the like.

【0002】

【PRIOR ART】

Collectin is a generic name of proteins having  $\text{Ca}^{2+}$ -dependent carbohydrate recognition region (CRD) and collagen-like region, and the member of these proteins is conceived to involve in basic immunity systems against a wide spectrum of microorganisms such as bacteria and viruses.

【0003】

The collectins that have been identified heretofore include mannan-binding protein (MBP), surfactant protein A (SP-A), surfactant protein D (SP-D), conglutinin and the like. These collectins are known to be constituted from basic structures, as illustrated in Fig. 1(a), comprising unique regions of: (1)  $\text{Ca}^{2+}$ -dependent carbohydrate recognition domain (CRD), and (2) collagen-like region [Malhortra et al., *Eur.J.Immunol.* Vol.22, 1437-1445, 1992], and a subunit may be formed from the three basic structures through making a triple helix in the collagen-like region, besides, such subunits may form an oligomer, e.g., trimer, tetramer and hexamer.

【0004】

In vertebrates, mechanisms involving cellular immune responses and specific antibody reactions are considered as dominant host-defense systems against invasion of the pathogenic bacteria, viruses and the like. Recently, involvement in nonspecific immune responses of the lectins such as conglutinin has been suggested, for example, it was reported that the lectins may play important roles in neutralizing and removing the various microorganisms in infants having insufficient maternal antibodies and undeveloped specific defense systems [Super et al., *Lancet*, Vol.2, 1236-1239, 1989]. Moreover, with respect to the roles of the lectins in the biological host-defense systems, it was reported that the host becomes liable to be infected by, for example, a reduction of the MBP concentration in blood due to genetic mutation of the MBP gene [Sumiya et al., *Lancet*, Vol.337, 1569-1570, 1991].

**【0005】**

The present inventors previously found that the conglutinin and the mannan-binding protein can inhibit infection and hemagglutination activity of H1 and H3 Type Influenza A viruses [Wakamiya et al., *Glycoconjugate J.*, Vol.8, 235, 1991; Wakamiya et al., *Biochem. Biophys. Res. Comm.*, Vol.187, 1270-1278, 1992].

**【0006】**

Thereafter, the present inventors isolated a cDNA clone encoding the conglutinin, and found that closer correlation may exist between the conglutinin gene and various surfactant protein D gene [Suzuki et al., *Biochem. Biophys. Res. Comm.*, Vol.191, 335-342, 1993].

**【0007】**

Thus, the collectin has been expected to be useful in investigating mechanisms of biological defense, and useful as a physiologically active medical material. Therefore, discovery of novel molecular species belonging to this family would largely contribute to various medical fields including therapy of infectious diseases, as well as biological fields.

**【0008】**

**[PROBLEMS TO BE SOLVED BY THE INVENTION]**

The present invention was accomplished in consideration of the aforementioned state of art, and an object of the invention is to provide a novel collectin which can be expected to exhibit physiological activities such as anti-bacterial, anti-viral activities, especially in human body.

**【0009】**

**[ELEMENTS TO SOLVE THE PROBLEMS]**

Accordingly, the present invention provides novel collectin gene and protein having characteristic structures of the collectins, which are distinct from those reported in the art, as follows:

[1] A polynucleotide comprising a nucleotide sequence which encodes a protein having an amino acid sequence of 206<sup>th</sup>-547<sup>th</sup> residues in SEQ ID NO: 2;

[2] A polynucleotide comprising a nucleotide sequence which encodes a protein having an amino acid sequence of 229<sup>th</sup>-547<sup>th</sup> residues in SEQ ID NO: 2;

[3] A polynucleotide comprising a base sequence of 670<sup>th</sup>-1695<sup>th</sup> bases in SEQ ID NO: 1;

[4] A polynucleotide comprising a nucleotide sequence of 739<sup>th</sup>-1695<sup>th</sup> bases in SEQ ID NO: 1;

[5] A polynucleotide which encodes a collectin protein and can hybridize under a stringent condition with a probe of an amplification product from PCR reaction performed using primers having base sequences set out in SEQ ID NOs: 4 and 5;

[6] A polynucleotide which can hybridize under a stringent condition with any of the polynucleotides [1]-[5], wherein the protein encoded by the polynucleotide is a human collectin protein comprising (1) Ca<sup>2+</sup>-dependent carbohydrate recognition domain (CRD), and (2) collagen-like region;

[7] A collectin protein encoded by any of polynucleotides [3]-[6];

[8] A collectin protein comprising an amino acid sequence of 206<sup>th</sup>-547<sup>th</sup> residues in SEQ ID NO:2;

[9] A collectin protein comprising an amino acid sequence of 229<sup>th</sup>-547<sup>th</sup> residues in SEQ ID NO:2;

[10] The collectin protein according to any of the collectin proteins [7]-[9] which consists of the amino acid sequence that comprises deletion, substitution and/or addition of one or more amino acid/s, and the amino acid sequence comprises (1) Ca<sup>2+</sup>-dependent carbohydrate recognition domain (CRD), and (2) collagen-like region.

[0010]

[EMBODIMENT]

In the preferred embodiment of the present invention, the polynucleotides [1]-[6] of the present invention may preferably be cDNA.

[0011]

The polynucleotide [2] comprises a nucleotide sequence encoding a protein having at least an amino acid sequence of

229<sup>th</sup>-547<sup>th</sup> residues in SEQ ID NO:2, however, additional nucleotide sequence such as those encoding a protein having an amino acid sequence such as 226<sup>th</sup>-228<sup>th</sup> residues or 211<sup>th</sup>-228<sup>th</sup> residues of SEQ ID NO: 2, or 102<sup>nd</sup>-228<sup>th</sup> residues, 91<sup>st</sup>-228<sup>th</sup> residues, 9<sup>th</sup>-228<sup>th</sup> residues, 1<sup>st</sup>-228<sup>th</sup> residues of SEQ ID NO: 2 may be contained upstream of the first methionine residue.

[0012]

Moreover, the polynucleotide [4] may further comprise, in 5' upstream thereof, a base sequence of 730<sup>th</sup>-738<sup>th</sup> bases or 685<sup>th</sup>-738<sup>th</sup> bases, or 358<sup>th</sup>-738<sup>th</sup> bases, 325<sup>th</sup>-738<sup>th</sup> bases, 79<sup>th</sup>-738<sup>th</sup> bases, 55<sup>th</sup>-738<sup>th</sup> bases or 1<sup>st</sup>-738<sup>th</sup> bases in SEQ ID NO: 1.

[0013]

Additionally, the polynucleotide [3] or [4] may comprise, in 3' upstream thereof, a base sequence of 1696<sup>th</sup>-2024<sup>th</sup> bases in SEQ ID NO:1.

[0014]

Further, taking into account of the usefulness as physiologically active medical materials, the proteins [7]-[10] of the present invention may preferably be from human, because it can be expected to exhibit anti-bacterial, anti-viral activities and the like in human body. Accordingly, the present invention contemplates a collectin protein derived from human, and upon examination of various human tissues, expression of a novel collectin was suggested, which was conceived to be useful.

[0015]

Further, the collectin protein [9] may preferably comprise at least an amino acid sequence of 229<sup>th</sup>-547<sup>th</sup> residues in SEQ ID NO: 2, and an amino acid sequence, for example, 226<sup>th</sup>-228<sup>th</sup> residues or 211<sup>th</sup>-228<sup>th</sup> residues in SEQ ID NO: 2, or 102<sup>nd</sup>-228<sup>th</sup> residues, 91<sup>st</sup>-228<sup>th</sup> residues, 9<sup>th</sup>-228<sup>th</sup> residues, 1<sup>st</sup>-228<sup>th</sup> residues in SEQ ID NO: 2 or the like may be additionally included in upstream of the first methionine residue.

[0016]

The stringent hybridization condition referred to in [5]-[6] may include, for example, the serial steps of:

prehybridization in a solution of 5 x SSC (prepared by diluting 20 x SSC (3 M NaCl, 0.3 M sodium citrate)), 1% blocking agent (Boehringer Mannheim), 0.1% N-lauroyl sarcosine, and 0.02% SDS, at 68 C for one hour; hybridization in a solution of 5 x SSC, 1% blocking agent, 0.1% N-lauroyl sarcosine, and 0.02% SDS containing cDNA probes (10 ng/ml), at 55 C for 16 hours; washing twice in a solution of 2 x SSC/0.1% SDS for 5 minutes; and washing twice in a solution of 0.5 x SSC/0.1% SDS at 55 C for 15 minutes, but some modifications/alterations of these conditions such as the concentration of the solution, incubation temperature and time may be made on the basis of the knowledge in the art.

[0017]

Further, deletion, substitution and/or addition of one or more amino acids as referred to in [10] above may be those which does not result in great changes of hydrophilic/hydrophobic, acidic/basic nature, functional groups in the collectin protein, and may not bring much alteration on the properties by (1)  $\text{Ca}^{2+}$ -dependent carbohydrate recognition domain (CRD) and (2) collagen-like region. On the basis of the amino acid sequences and structures of the proteins belonging to the collectin families reported in the art, for example, deletion, substitution and/or addition of 1-10 amino acid residue/s in (1)  $\text{Ca}^{2+}$ -dependent carbohydrate recognition domain (CRD), and 1-100, preferably 1-15 amino acid residue/s in (2) collagen-like region may be allowed.

[0018]

Although the present invention will be described in more detail along with the following examples, as a matter of course, the present invention should not be interpreted narrower based on the disclosure of the following examples.

[0019]

The Examples demonstrate the search on EST database (Example 1); preparation of the probe for screening (Example 2); screening of cDNA library from human placenta (Example 3); sequencing of the base sequence of the novel collectin (Example 4); genomic Southern analysis of the novel collectin (Example

5); Northern analysis of the novel collectin with various human tissues (Example 6); genomic Southern analysis of the novel collectin with tissues from various animal species (Example 7); and genetic analysis of the novel collectin (Example 8).

[0020]

Example 1: Search on EST Database

Highly conserved regions between molecules of the known collectins, i.e., human MBP, human SP-A and human SP-D were searched by comparing the amino acid sequences thereof (see Figures 2 and 3, in which amino acid residues which were recognized to be homologous between those proteins were boxed). As a result thereof, it was suggested that the region consisting of 27 amino acids, namely from 220<sup>th</sup> amino acid to 246<sup>th</sup> amino acid in human MBP sequence (shown in Figure 3, reversed characters, SEQ ID NO:6), was highly homologous, some consensus sequences corresponding to this region were therefore prepared, and searches on EST (Expressed Sequence Tags) database were conducted with such sequences. For this search, the EST database including 676750 sequences published on October 11, 1996 was used.

[0021]

Consequently, some data comprising highly homologous amino acid sequences with the sequence of the 27 amino acid described above were obtained. The amino acid sequences in the obtained data were further searched with GenBank/EST database, then they were determined as to whether they were from known or unknown genes, and it was confirmed that, when the amino acid sequence of Glu-Lys-Cys-Val-Glu-Met-Tyr-Thr-Asp-Gly-Lys-Trp-Asn-Asp-Arg-Asn-Cys-Leu-Gln-Ser-Arg-Leu-Ala-Ile-Cys-Glu-Phe (SEQ ID NO: 3) was used as a consensus sequence, there was two data (Registration Nos. W72977 and R74387) having highly homologous but with unknown base sequences. These were respectively from placenta and from fetal heart, and were clones indicating portions of base sequences of the novel collectin.

[0022]

Thereafter, the clone from fetal heart (I.M.A.G.E. Consortium Clone ID 34472) was purchased from ATCC (American Type Culture Collection), and utilized to prepare a screening probe for obtaining a novel collectin.

[0023]

Example 2: Preparation of Probe for Screening

The base sequence of insert DNA of the clone described above was determined using primers (Pharmacia, M13 Universal Primer (SEQ ID NO: 7, 5'-fluorescein-cgacgttgtaaaacgacggccagt-3') and M13 Reverse Primer (SEQ ID NO: 8, 5'-fluorescein-caggaaacagctatgac-3')).

[0024]

From this base sequence, an open reading frame was selected by matching it to the collectin amino acid sequence, and the base sequence corresponding to the amino acid sequence which could be read from the open reading frame was extracted, then, primers for digoxigenin (DIG) labeled cDNA probes (Reverse Primer: caatctgatgagaaggatgatg (SEQ ID NO: 4) and Forward Primer: acgaggggctggatgggacat (SEQ ID NO: 5)) corresponding to the parts of the base sequences were produced using DNA/RNA Synthesizer of Applied Biosystems, 392A. DIG labeling was performed using PCR DIG Probe Synthesis Kit (Boehringer Mannheim). The reaction mixture contained: plasmid DNA (clone W72977, 50 ng/  $\mu$ l), 2  $\mu$ l (100 ng); 10  $\times$  Buffer 5  $\mu$ l; 25 mM  $MgCl_2$ , 5  $\mu$ l; dNTP (PCR Labeling Mix), 5  $\mu$ l; 20  $\mu$ M Reverse Primer, 2.5  $\mu$ l; 20  $\mu$ M Forward Primer, 5  $\mu$ l;  $H_2O$ , 28  $\mu$ l; Taq Polymerase, 0.5  $\mu$ l. PCR reaction was performed with Zymoreactor of ATTO Corp. through 35 cycles of: 1 minute at 92 C, 1 minute at 55 C, and 2 minutes at 72 C.

[0025]

Example 3: Screening of cDNA Library from Human Placenta

First, phage cDNA library from human placenta was titrated as follows. Escherichia coli Y1090r<sup>-</sup>, 0.2 ml, which had been cultured at 37 C for 16 hours in mLb medium (LB medium (1 g tryptone, 0.5g yeast extract and 0.5 g NaCl in total volume of 100 ml) containing 10 mM  $MgSO_4$  and 0.2% maltose) and 0.1 ml of

cDNA library serially diluted with SM buffer (5.8 g NaCl, 2 g  $\text{MgSO}_4 \cdot 7\text{H}_2\text{O}$ , 2 M Tris-HCl (pH 7.5) 25 ml, and 2% gelatin 5 ml in total volume of 1L) were incubated at 37 C for 15 minutes, then the mixtures were added to 2.5 ml of LB-TOP agarose (0.75% agarose/LB medium) to make homogenous solutions, and plated onto 90 mm  $\phi$  LB Medium Plates (Iwaki Glass), (1.5% agar/LB medium). The added solutions were hardened at room temperature for 15 minutes, then incubated for 5 hours at 42 C. The plaques on each of the plates were counted, and the titer of the phage was calculated. Consequently, the titer calculated to be  $2.1 \times 10^{10}$  pfu/ml. The screening was performed as follows using the probe prepared in Example 2.

[0026]

Escherichia coli Y1090r<sup>-</sup>, 0.6 ml, which had been cultured at 37 C for 16 hours in mLB medium, and cDNA library diluted with SM buffer to  $1 \times 10^5$  pfu were incubated at 37 C for 15 minutes, then the mixture was added to 7.5 ml of LB-TOP agarose (0.75% agarose) to make a homogenous solution. The solution was plated onto ten LB square plates of 140 cm<sup>2</sup> (Nissui Seiyaku), hardened at room temperature for 15 minutes, then the plates were incubated for 5 hours at 42 C. After plaque formation of each of the plates was confirmed, the transfer to the nylon membranes was performed. The transfer was performed using Nytran 13N (Schleicher and Schuell Co.). The filters (12.5 cm x 9.0 cm in size) were immersed in distilled water for 10 minutes to be wet, then the excess water was removed on Whatmann 3MM Paper, and the filters were placed on the plates having the plaques formed thereon. After standing for two minutes, the filters were recovered and air-dried for 10 minutes. The phage DNA on the filters was denatured for 2 minutes with 0.2 M NaOH/1.5 M NaCl, followed by neutralization with 0.4 M Tris-HCl (pH 7.6) / 2 x SSC for 2 minutes and washing with 2 x SSC for 2 minutes. Thereafter, the phage DNA was fixed on the membrane by UV irradiation with GS GENE LINKER (BioRad). Hybridization, and detection of the signals were conducted as follows. The filters were soaked in 2 x SSC, and the excess moisture was removed using

Whatmann 3MM Paper, then the filters were placed in a hybridization bag and prehybridization at 68 C for one hour in a hybridization solution (5 x SSC, 1% blocking agent, 0.1% N-lauroyl sarcosine and 0.02% SDS) was performed. Subsequently, the hybridization solution was removed from the bag, and the hybridization solution containing DIG labeled cDNA probe at a concentration of 10 ng/ml was added thereto, and hybridization was proceeded at 55 C for 16 hours. After the hybridization was completed, the filters were washed twice in a solution of 2 x SSC/0.1% SDS for 5 minutes; and further washed twice in a solution of 0.5 x SSC/0.1% SDS for 15 minutes. Then, SDS was removed using DIG buffer I (100 mM Tris-HCl, 150 mM NaCl (pH 7.5)) for 1 minute, and the filters were blocked with DIG buffer II (1% blocking agent in DIG buffer I) for 30 minutes. After washing the filters with DIG buffer I for one minute, a solution of alkaline phosphatase labeled anti-DIG antibody (Boehringer Mannheim) which was diluted to 5000-fold in DIG buffer II was added, and the reaction between antigen and antibody were allowed for 30 minutes at room temperature, then the filters were washed twice with DIG buffer I for 15 minutes at room temperature. Through the subsequent treatment of the filters with DIG buffer III (100 mM Tris-HCl, 100 mM NaCl (pH 9.5), 50 mM MgCl<sub>2</sub>) for 3 minutes, the concentration of Mg<sup>2+</sup> was elevated, when a solution of NBT/BCIP (WAKO Chem., Co.) in DIG buffer III was added for color development, 10 positive clones were identified. The plaques corresponding to these clones were excised from the plates and placed in the tubes containing 1 ml of SM buffer, after stirring for 10 minutes, each of the buffer solution was serially diluted with SM buffer, and 0.1 ml of the diluted solution was mixed with 0.2 ml cultures of Escherichia coli Y1090r<sup>-</sup> which had been cultured in mLb medium for 16 hours at 37 C, thereafter, the mixture was incubated for 15 minutes at 37 C. Then the mixed solution was added to 2.5 ml of LB-TOP agarose to make a homogenous solution, the solution was plated into ten 90mm $\phi$  LB plates, hardened at room temperature for 15 minutes, then the plates were incubated for 5 hours at 42 C, thereby, several

plaques were obtained, and the secondary screening was performed essentially in accordance with the procedures of the primary screening.

[0027]

Example 4: Sequencing of Novel Collectin Base Sequence

The plaque of the clone that was expected as being appropriate among the positive clones obtained in the above secondary screening was excised from the plates, then was placed into a tube containing distilled water 200  $\mu$ l followed by stirring for 30 minutes at room temperature, and the tube was centrifuged at 15,000 rpm for 5 minutes, and the supernatant was obtained therefrom.

[0028]

The insert DNA was amplified by PCR with TaKaRa LA PCR Kit Ver.2 (TAKARA Syuzo, Co.) using the resulting supernatant as a template. PCR reactions contained: the supernatant, 27  $\mu$ l; 10 x LA PCR Buffer II ( $Mg^{2+}$  free), 5  $\mu$ l; 25 mM  $MgCl_2$ , 5  $\mu$ l; dNTP Mix, 8  $\mu$ l; 20  $\mu$ M gtl1 Reverse Primer (SEQ ID NO: 9: 5'-ttgacaccagaccaactggtaatg-3'), 2.5  $\mu$ l; 20  $\mu$ M gtl1 Forward Primer (SEQ ID NO: 10: 5'-ggtggcgacgactcctggagcccg-3'), 2.5  $\mu$ l; LA Taq polymerase, 0.5  $\mu$ l; and  $H_2O$ , to make final volume of 50  $\mu$ l. PCR reaction was performed using Applied Biosystems Gene Amp PCR System 9600, with 30 cycles of: 20 seconds at 98 C, and 5 minutes at 68 C. The PCR product was verified by the electrophoresis on 1% agarose gel, and purified through excising from the gel. For this purification step, Sephaglas BandPrep Kit (Pharmacia) was used.

[0029]

The excised DNA fragment was incorporated into pCR2.1 vector (Invitrogen, TA Cloning Kit). The recombinant vector was transformed into TOP10F' cell included in the Invitrogen TA Cloning Kit. The transformants were cultured in LB medium (containing 100  $\mu$ g/ml ampicillin), and three kinds of plasmids were extracted by alkaline SDS method.

[0030]

Thus obtained DNA was cleaved with restriction enzymes that were expected to be adequate, and each DNA fragment was incorporated into pUC18 vector followed by transformation into XL1-Blue cell. The transformants were cultured on LB medium (containing 100 g/ml ampicillin), and the plasmids were extracted by alkaline SDS method. CL-P1-2-1 resulted in a plasmid containing EcoRI-Hind III fragment and Hind III-EcoRI fragment; CL-P1-3-4 resulted in a plasmid containing EcoRI-BamHI fragment, BamHI-SmaI fragment, SmaI-HindIII fragment, KpnI-Sau3AI fragment, Sau3AI-EcoRI fragment, EcoRI-KpnI fragment and EcoRI-SmaI fragment; CL-P1-3-7 resulted in a plasmid containing EcoRI-BamHI fragment, BamHI-SmaI fragment, SmaI-HindIII fragment, KpnI-Sau3AI fragment, Sau3AI-EcoRI fragment, EcoRI-KpnI fragment and KpnI-EcoRI fragment. The primers were prepared by synthesizing with DNA/RNA synthesizer the following primers labeled with M13 Universal Primer (SEQ ID NO: 5) and M13 Reverse Primer (SEQ ID NO: 6) respectively attached to the Autoread Sequencing Kit as well as FITC (Pharmacia, Fluore Prime), and were their entire regions were base sequenced with Autoread Sequencing Kit (Pharmacia) and A.L.F. Autosequencer.

[0031]

HPP 1: 5'-fluorescein-cgtgaaaatgaatggaagtgg-3' (SEQ ID NO: 11),  
HPP 2: 5'-fluorescein-ttttatccattgctgttcctc-3' (SEQ ID NO: 12),  
HPP 3: 5'-fluorescein-ctggcagtccccgaggtccag-3' (SEQ ID NO: 13),  
HPP 5: 5'-fluorescein-gctggtccccccgagagcgt-3' (SEQ ID NO: 14)

The outline of the sequencing strategy performed is shown in Figure 4. An ORF of the obtained collectin is illustrated in Figure 4 (a), wherein a collagen-like region is denoted as G-X-Y. Further, in Figure 4 (b), name of each primer and positions of the base sequences determined by the sequencer (shown as allows), and M13 Universal Primer (shown as U) as well as M13 Reverse Primer (shown as R) are illustrated.

[0032]

Further, a base sequence around the 5'-end region comprising a transcription initiation site was determined using Cap site cDNA.

[0033]

First PCR was performed with Cap Site cDNA, on Human Liver (NIPPON GENE) using TGP1 Primer (5'-tcttcagtttcctaatccc-3' (SEQ ID NO: 16)) that was synthesized with the attached 1RC2 Primer (5'-caagggtacgccacagcgtatg-3' (SEQ ID NO: 15)) and 392A DNA/RNA Synthesizer (Applied Biosystems). The employed reaction mix solution contained LA PCR Buffer II (Mg<sup>2+</sup> free), 2.5 mM MgCl<sub>2</sub>, each 200 M of dATP, dCTP, dGTP and dTTP (all of which are manufactured by TAKARA Syuzo, Co.), 1 l; Cap Site cDNA Human Liver; 0.5 μ 1RC2 Primer (both of which are manufactured by NIPPON GENE), and 0.5 M TGP1 Primer, in total volume of 50 l. PCR was performed using a program comprising 35 cycles of: heat denaturation for 20 seconds at 95 C, anealing for 20 seconds at 60 C, extension for 20 seconds at 72 C, with heat denaturation for 5 minutes at 95 C prior to the repeated reaction and final extension for 10 minutes at 72 C. After completing the first PCR, nested PCR was conducted. The reaction was performed using 1 l of the first PCR product as a template, together with primers of 2RC2 Primer (5'-gtacgccacagcgtatgatgc-3' (SEQ ID NO: 17)) attached and of synthetic TGP2 Primer (5'-cattcttgacaaacttcatag-3' (SEQ ID NO: 18)) that was synthesized similarly to TGP1 Primer, and with the same reaction components and program (except that the cycle number was 25) as in the first PCR. The PCR reaction was performed with TaKaRa PCR Thermal Cycler 480. After thus obtained PCR product was confirmed on agarose gel electrophoresis, the band was excised from the gel, followed by freezing at -80 C for 10 minutes, centrifuge at 15000 rpm, for 10 minutes, and then the supernatant was purified by ethanol precipitation.

[0034]

The purified DNA fragment was incorporated into pT7Blue Vector (Novagen), and the vector was transformed into competent

XL1-Blue cell. The transformants were cultured on LB medium (containing 100 g/ml ampicillin), and the plasmids were extracted by alkaline SDS method, followed by sequencing of the base sequence with Autoread Sequencing Kit (Pharmacia) and A.L.F. DNA Sequencer. The employed primers were M13 Universal Primer (SEQ ID NO: 7) and M13 Reverse Primer (SEQ ID NO: 8) attached to AutoRead Sequencing Kit.

[0035]

As a result thereof, it was confirmed that the cDNA clone of the novel collectin that was obtained in Example 3 contained 2024 bases comprising ORF (open reading frame) of 1026 bases encoding 342 amino acids set out in SEQ ID NO: 2.

[0036]

Next, when the homology of the DNA and amino acid sequence was searched on GenBank database, the results revealed that the amino acid sequence of the obtained protein is distinct from those of the collectins identified previously and is therefore derived from a novel protein.

[0037]

In addition, the amino acid sequence of the novel collectin of the present invention was compared to those of three collectin proteins reported in the art. The alignment is shown in Figures 5 and 6. Similarly to Figures 2 and 3, homologous amino acid residues were boxed. This alignment suggests that the obtained novel protein shares homology with known collectins and it belongs to the collectin family.

[0038]

#### Example 5: Genomic Southern Analysis of Novel Collectin

Genomic Southern analysis was performed in order to clarify as to whether the novel collectin gene comprising the cDNA sequence verified in Example 4 was a single copy gene or a multi copy gene.

[0039]

Four g of human genomic DNA (Promega) from human blood was digested with any of the restriction enzymes of (1) EcoRI, (2) XbaI, (3) HindIII, (4) PstI, (5) BglII or (6) BamHI, followed

by electrophoresis on 0.8% agarose gel at 100 mA, for 3 hours. After the electrophoresis was completed, they were transferred to a nylon membrane (Nytran 13N) to prepare a membrane for the analysis. For the transfer step, the electrophoresed gel was first immersed in 100 ml of 0.25 N HCl for 10 minutes, washed three times with distilled water, then immersed twice in 100 ml of a denaturalizing solution (1.5 M NaCl, 0.5 M NaOH) for 15 minutes, and immersed in 100 ml of a neutralizing solution (0.5 M Tris-HCl, 3 M NaCl (pH 6.8)) for 30 minutes so that depurination, denaturation and neutralization were accomplished, the DNA was then transferred using Vacuum Blotting System (Toyobo Engineering, VB-30). In this step, the membrane is used which had been pretreated by immersing it in 2 x SSC for 5 minutes and in 20 x SSC for 5 minutes, while a pad is used which had been soaked with 20 x SSC. After the transfer was terminated, fixation of the DNA was performed by UV irradiation.

[0040]

As a hybridization probe employed for the Southern analysis, DNA probe consisting of the base sequence of:  
gaagacaagt cttcacatct tgttttcata aacactagag aggaacagca  
atggataaaa aaacagatgg tagggagaga gagccactgg atcggcctca  
cagactcaga g (SEQ ID NO: 21) was used, wherein it was prepared by labeling a portion of ORF in the cDNA sequence of the novel collectin according to Example 4 with primers:

5'-gaagacaagtcttcaactcttg-3' (SEQ ID NO: 19),

5'-ctctgagtctgtgaggccgac-3' (SEQ ID NO: 20), and

the above-mentioned PCR DIG Probe Synthesis Kit.

Prior to the hybridization, the probe was boiled for 10 minutes, and was rapidly frozen with dry ice/ethanol for 5 minutes.

[0041]

First of all, membrane treated for a transcription was immersed in 2 x SSC for 5 minutes, then prehybridization was performed in 10ml of ExpressHyb Hybridization Solution (Clontech) at 65 C for 30 minutes. Subsequently, the above frozen probe was diluted to 10 ng/ml in ExpressHyb Hybridization Solution, and 2 ml of this solution was used for hybridization

at 65 C for one hour.

[0042]

Following the hybridization, the membrane was washed by: shaking twice in 20 ml of 2 x SSC, 0.1% SDS solution at room temperature for 5 minutes, then twice in 20 ml of 0.2 x SSC, 0.1% SDS solution at 65 C for 15 minutes. Next, the membrane was washed twice with 50 ml of DIG buffer I (100 mM Tris-HCl, 150 mM NaCl (pH 7.5)) at room temperature for one minute in order to remove SDS, and was blocked in 50 ml of DIG buffer II' (1.5% blocking agent, DIG buffer I) at room temperature for one hour. Thereafter, the membrane was treated for 30 minutes with 10 ml of alkaline phosphatase labeled anti-DIG antibody which had been diluted to 5000-fold in DIG buffer I containing 0.2% Tween20 followed by washing twice by shaking in 50 ml of DIG buffer I which contains 0.2% Tween20 at room temperature for 20 minutes. After soaking the membrane twice in 10 ml of DIG buffer III at room temperature for 3 minutes, it was placed in a hybridization bag, and CSPD (registered trade name, Boehringer Mannheim: chemiluminescence substrate) that had been diluted to 100-fold in DIG buffer III was added thereto so that the solution can spread over the membrane. Subsequently, the membrane was exposed onto Instant Film T612 (Polaroid).

[0043]

Consequently, it was speculated that the gene of the obtained novel collectin has been a single copy gene, because only one or two signal/s could be detected from the respective genomic DNA which was digested with each of the restriction enzymes, as shown in the lanes of Figure 7.

[0044]

Example 6: Analysis of Expression Distribution in Human Tissue  
by Novel Collectin

In order to examine the expression of the mRNA of the novel collectin of the present invention in various human tissues, analysis was performed by RT-PCR.

[0045]

RT-PCR was performed using RNA LA PCR Kit (AMV) Ver.1.1 (TAKARA Syuzo, Co.) with each RNA taken from several human tissues ((1) brain, (2) heart, (3) kidney, (4) spleen, (5) liver, (6) small intestine, (7) muscle, (8) testis, (9) placenta, or (10) colon (OriGene Technologies, Inc.)) as a template. First, reverse transcription reaction was conducted in the following reaction mixture. The reaction mixture contained 5 mM MgCl<sub>2</sub>, 1 x RNA PCR Buffer, 1 mM dNTP Mixture, 1 U/ 1 Rnase inhibitor, 0.25 U/ 1 reverse transcriptase, 0.125 M Oligo dT-Adaptor Primer, RNA 1 g, and was adjusted to total volume of 20 l with RNase free distilled water. At the same time, a reaction mixture without reverse transcriptase was also prepared for the negative control. The reaction solution was placed in 0.2 ml tube, and subjected to PCR with TaKaRa PCR Thermal Cycler PERSONAL (TAKARA Syuzo, Co.) through 1 cycle of: 30 minutes at 42 C, 5 minutes at 99 C, and 5 minutes at 5 C. Thus resulted PCR product was subsequently used for LA PCR with the following reaction mixture. 2.5 mM MgCl<sub>2</sub>, 1 x LA PCR Buffer II (Mg<sup>2+</sup> free), 2U TaKaRa LA Taq and two kinds of 0.2 M primers (RT-PCR Primer U: 5'-gtgcccctggccctgcagaatg-3' (SEQ ID NO: 22) and RT-PCR Primer R: 5'-gcatatcaccctggggaacatttttag-3' (SEQ ID NO: 23) that could amplify a cDNA sequence spanning from neck region to carbohydrate recognition domain of the novel collectin are mixed and the mixture was adjusted to total volume of 80 l with sterile distilled water. PCR was performed through 1 cycle of 2 minutes at 94 C and 50 cycles of: 30 seconds at 94 C, 30 seconds at 60 C and 90 seconds at 72 C. The reaction product was separated on 1% agarose gel electrophoresis, followed by staining with ethidium bromide solution (0.1 g/ml), verification of the electrophoretic pattern with transilluminator, and the expressed tissues were identified.

[0046]

Further, in order to compare the expressed amount in each of the tissues, RT-PCR was performed to amplify a part of -actin in each of the tissues; and the amount of RNA was corrected.

The RT-PCR was performed similarly to the above procedure with reverse transcriptase reaction, PCR reaction, and identified using 1% agarose gel electrophoresis as described above. The reaction mixture of the reverse transcription contained 5 mM MgCl<sub>2</sub>, 1 x RNA PCR Buffer, 1 mM dNTP Mixture, 1U/ 1 RNase inhibitor, 0.25 U/ 1 reverse transcriptase, 2.5 M random 9 mer, RNA 10 ng, which was then adjusted to total volume of 60  $\mu$ l with RNase free distilled water. PCR was performed through 1 cycle of: 10 minutes at 30 C, 15 minutes at 42 C, 5 minutes at 99 C and 5 minutes at 5 C. Thus resulted PCR product was subsequently used for PCR with the following reaction mixture. 2.5 mM MgCl<sub>2</sub>, 1 x LA PCR Buffer II (Mg<sup>2+</sup> free), 2U TaKaRa LA Taq and 0.25 M human  $\alpha$ -actin sense primer 5'-caagagatggccacggctgct-3' (SEQ ID NO: 24), 0.25 M human  $\alpha$ -actin antisense primer 5'-tccttctgcatcctgtcggca-3' (SEQ ID NO: 25) are mixed and the mixture was adjusted to total volume of 40  $\mu$ l with sterile distilled water. PCR was performed through 30 cycles of: 15 seconds at 94 C, and 30 seconds at 68 C.

[0047]

The results are shown in Figure 8, suggesting that mRNA of the novel collectin of the present invention has been expressed in placenta (lane 9), spleen (lane 4), and kidney (lane 3), but extremely high expression in placenta is clearly suggested.

[0048]

#### Example 7: Genomic Southern Analysis of Novel Collectin from Various Animals

In order to elucidate conservation of the collectin gene of the present invention in the other species of animals, analysis by genomic Southern hybridization was performed.

[0049]

As a hybridization probe, DNA probe labeled with DIG prepared by labeling, with the above-described PCR DIG Probe Synthesis Kit (Boehringer Mannheim), a portion corresponding to ORF in the cDNA sequence of the novel collectin as described above was used, while the employed membranes were prepared by

treating, with restriction enzyme EcoRI, 5 g of each genomic DNAs of (1) human (Promega), (2) monkey (Clontech), (3) rat (Promega), (4) mouse (Promega), (5) dog (Clontech), (6) cow (Promega), (7) rabbit (Clontech), and (8) chicken (Promega), electrophoresising the DNAs on agarose gel, transferring them to Nytran 13N membrane and fixing the same by UV irradiation.

[0050]

Using such probe and membrane, hybridization was performed according to the following procedures. First, the membrane was immersed in 2 x SSC for 5 minutes, then prehybridization was performed in 10 ml of ExpressHyb Hybridization Solution at 65 C for 30 minutes. Subsequently, the probe that had been frozen as described above was diluted in the ExpressHyb Hybridization Solution to be 10 ng/ml, and 2 ml of thus diluted probe solution was used for hybridization at 65 C for one hour.

[0051]

Following the hybridization, the membrane was washed by: shaking twice in 20 ml of 2 x SSC, 0.1% SDS at room temperature for 5 minutes, and then shaking twice in 20 ml of 0.2 x SSC, 0.1% SDS at 68 C for 15 minutes. Next, the membrane was washed twice with DIG buffer I at room temperature for one minute in order to remove SDS, and was blocked in 50 ml of DIG buffer II' at room temperature for one hour. Thereafter, the membrane was treated for 30 minutes with 10 ml of alkaline phosphatase labeled anti-DIG antibody which had been diluted to 5000-fold in DIG buffer I which contains 0.2% Tween20 followed by washing twice with shaking in 50 ml of DIG buffer I containing 0.2% Tween20 at room temperature for 20 minutes. After soaking the membrane twice in 10 ml of DIG buffer III at room temperature for 3 minutes, it was placed in a hybridization bag, and CSPD diluted to 100-fold in DIG buffer III was added thereto so that the solution can spread over the membrane, the membrane was subsequently exposed to Instant Film T612.

[0052]

The result of this analysis is shown in Figure 9, wherein clear signals can be found in all lanes except for the lane on chicken (Lane 8), it was therefore demonstrated that the novel collectin gene of the present invention has been conserved between the mammalian species.

[0053]

Example 8: Genetic Analysis of Novel Collectin

To elucidate the genetic positional relevance of the present collectin against the known collectins, analysis was performed based on the DNA sequence of the novel collectin as obtained, and a phylogenetic tree was created.

[0054]

The collectins selected as subjects for analysis were several kinds of proteins belonging to the collectin family shown in Figure 10 (in Figure, the novel collectin of the present invention is denoted as CL-P1, while a collectin from human liver which was recently isolated by the present inventor is denoted as CL-L1 (See, the specification of the Japanese Patent Application No. Hei 10-11281)), then multiple alignments were produced by clustalw method using the regions containing lectin domains based on the data obtained by searching each amino acid sequence on GenBank database, and the phylogenetic tree was created based on such alignments by N-J (neighbor-joining) method using Phylip Version 3.57c package program.

[0055]

Consequently, as shown in Figure 10, although SP-D, bovine CL-43 and bovine conglutinin have constituted single cluster, additionally, MBP and SP-A have respectively constituted separate clusters, while the collectin gene of the present invention has not belonged to any of these clusters similarly to CL-L1. Furthermore, it was speculated that the collectin of the present invention may constitute a distinct cluster which is genetically distinguishable from those of the conventional collectins including CL-L1.

[0056]

[EFFECTS OF THE INVENTION]

As stated above, the present invention provides the novel collectin gene as well as the novel collectin protein that have the characteristic structures to be seen in the known collectin and are different from the previously reported collectin.

#### [BRIEF DESCRIPTION OF DRAWINGS]

[FIGURE 1] A schematic view showing basic structures and overviews of the principal collectins reported in the prior art.

[FIGURE 2] An alignment of the preceding half portions of amino acid sequences of three collectins reported in the prior art.

[FIGURE 3] An alignment of the latter half portions of the amino acid sequences as shown in Figure 2;

[FIGURE 4] Each of the primers used for sequencing the novel collectin of the present invention including (b) the nucleotide sequences which were read out from the sequencer and (a) an ORF of the obtained novel collectin;

[FIGURE 5] An alignment of the preceding half portions of amino acid sequences of the three collectins reported in the

prior art and the novel collectin of the present invention;

[FIGURE 6] An alignment of the latter half portions of the amino acid sequences in Figure 5.

[FIGURE 7] Results of genomic Southern analysis with the novel collectin of the present invention, and the restriction enzymes employed in each of the lanes are (1) EcoRI, (2) XbaI, (3) HindIII, (4) PstI, (5) BglII and (6) BamHI.

[FIGURE 8] Results of analysis of distribution of expression of mRNA in: (1) brain, (2) heart, (3) kidney, (4) spleen, (5) liver, (6) small intestine, (7) muscular tissue, (8) testis, (9) placenta, or (10) large intestine which clarify the tissue distribution of the novel collectin of the present invention.

[FIGURE 9] Results of genomic Southern analysis of various vertebrates, i.e., (1) human, (2) monkey, (3) rat, (4) mouse, (5) dog, (6) cow, (7) rabbit and (8) chicken which elucidate the interspecies conservation of the novel collectin of the present invention.

[FIGURE 10] A phylogenetic tree of various collectins.

[DOCUMENT TITLE]            ABSTRACT

[ABSTRACT]

[PURPOSES]    To provide the novel collectin which are expected to exhibit anti-bacterial, anti-viral activity or the like especially in human body.

[TECHNICAL ELEMENTS]    Collectin gene comprising a base sequence set out in SEQ ID NO: 1, and collectin protein comprising an amino acid sequence set out in SEQ ID NO: 2.

[REPRESENTATIVE FIGURE]            None
